

TYPICAL BT2 CONFIGURATIONS

1. Single Midland BT2 device, "Rider only"

Bluetooth connection fit for mobile phone, GPS and MP3 player or a mobile phone with MP3 feature (to listen to music)

Wired connection for stereo music player (iPOD/MP3 player)

Bike to bike communication system that allows two riders to communicate up to maximum distances of 200 meters

2. "Rider & pillion " with two Midland BT2 devices

Rider to Pillion intercom feature

Bluetooth connections for Rider and Pillion depending on needs: each connection is fit for mobile phone, driver's GPS system and MP3 stereo player or mobile phone with MP3 feature (to listen to music)

Wired connection for stereo music player (iPOD/MP3 player)

3. Groups of bikes with Rider and Pillion

Rider to Pillion intercom system

Bluetooth connections for Rider and Pillion depending on needs: each connection is fit for mobile phone, driver's GPS system and MP3 stereo player or mobile phone with MP3 feature (to listen to music)

Wired connection for stereo music player (iPOD/MP3 player)

Group communication ("bike to bike"): it is possible to connect a PMR446 transceiver to all motorbikes in order to be able to communicate as a group. The PMR446 transceiver can be connected in Bluetooth or wired mode to both the rider's or pillion's unit.
